

Application Security

Keep your applications secure and running

EVERY SYSTEM CAN BE COMPROMISED GIVEN IT ENOUGH TIME

Facorne Technologies Application Security protects your applications from external and internal threats. As those threats evolve, we keep your applications in compliance using best security practices. Through proven methodologies, our security experts will assess your current business and technical needs and provide you with a comprehensive solution to your application security needs.

We can help you secure and mitigate threats to your applications such as DDOS, malware and OWASP top 10 with industry-leading tools with our expertise.

APPLICATION SECURITY

Our application security services protect the applications your business relies on with comprehensive, policy-based web application security that blocks attacks and scales to ensure optimum performance. Some of our application security tools include but are not limited to:

- Web application security and top vulnerability mitigations including OWASP vulnerabilities
- Zero-day protection against unknown vulnerabilities
- DDOS protection
- Bot Defense

SECURE DNS

Domain Name Services (DNS) is one of the core applications within your infrastructure. With our secure DNS services, we design and deploy secure DNS that delivers a real-time, signed query response to name-resolution services.

Secure Email

While email remains one of the top methods for distributing malware, email-based exploits have become more sophisticated over last few years. Our security experts will guide you in securing your email services with the industry's best tools and practices. With our leadership, you will gain

superior protection across the attack continuum – before, during and after an attack within your email environment.

WEB FILTERING

As lines continue to blur between personal and professional Internet use at work, unmonitored browsing activities create challenges including productivity loss, HR, legal and compliance issues. They also can expose your company to significant risks such as viruses and malware. Our web filtering services include end-to-end guidance of implementing a best practice solution to protect your business. Our security experts will configure policies such as URL filtering, identity and access restrictions, malware protection and reporting based on your business requirements.

COMPLIANCE

Protecting and reporting on application security is a key requirement for maintaining compliance across a number of industry standards. Our experts will work with you and assist in building the proper configuration requirements to meet your security policy and overall compliance-readiness needs.

Let our security experts assess your current business and technical needs and provide you with a comprehensive solution to your application security.

FACORNE TECHNOLOGIES SOLUTIONS

We provide a wide range of application security services including:

- Application Security Architecture: consulting, technology strategy workshops and solution development.
- Web Application Firewalls Design and Implementation for protecting your applications.
